Hi Raghu Sir,

The port 108 issue has been resolved by Bahiru, and the service is now up and running successfully.

However, we are currently facing an issue where the API keys are getting rejected with a “Not Authorized” response. This error usually occurs when the API keys are incorrect or invalid.

In this case, the same API keys are working correctly in local, 104, and 105 environments, so the issue does not appear to be with the keys themselves. Since the service is installed and

This item is a dependency on Thuan’s work, so we would like to resolve this as quickly as possible. We may need to reach out to OpenDental support to investigate why valid API key:

Please let us know how you’d like us to proceed.

Hi Raghu Sir,

Following up on the API authorization issue discussed earlier.

1/8/26, 11:29 AM

aumtech.io Mail - Update on Port 108 Resolution & API Authorization Issue

Since this issue is a critical dependency for Thuan's ongoing work, it is important that we resolve it at the earliest to avoid further blockers. As the service is running fine and the same API keys work in other environments, timely investigation (possibly with OpenDental support) would help us move forward without impacting dependent tasks.

Please let us know the next steps or if we should proceed with reaching out to OpenDental support.
